HW5: The Final Iteration and Presentation

HW5 will continue to follow the iterative development process laid out in the course policies.

Reminder: Don't forget to tag your final submission.

However, HW5 will also include the addition of a final presentation.

Presentation Instructions

Your presentation must have two parts: (1) feature demo and (2) reflection.

Feature Demo Part

Presentation time: 10 min

To demo your application's features, tell a story in which characters with a names of your choosing (e.g., "Bob", "Lisa") use your application to accomplish various tasks. Be sure to tell the story from the characters' perspectives. This will make your demo more relatable and captivating to the audience. (Do not dryly list features, which is sure to put the audience to sleep).

Reflection Part

Presentation time: 15 min

For this part of the presentation, you will reflect on challenges your team faced during the project and successes that you were able to achieve. In particular, you must present 2 items from each of the following topic categories (for a total of 4).

Challenge topics:

- Design or technical challenges
- Team coordination/collaboration challenges
- Feature that was challenging to design the UI for

Success topics:

- Software design aspect that you are proud of (architectural or detailed)
- Feature that you are proud of
- Practice/procedure/technique/tool that made development easier/more efficient/better

Each team member must present at least 1 of the items. If your team has more than 4 members, only 4 must present.
