HW3.5 Grading Explained

Each gradable unit in HW3.5 received a score between 0 and 10:

- 10: Verily, I can find no flaw. It's very good, even.
- 9: Few bugs and very usable.
- 8: More bugs, but still usable.
- 7: Numerous problems, but still mostly serviceable
- 6: Minimally helpful, although clearly some thought and effort went into it
- 0–5: Varying degrees of incompleteness/defectiveness

Each gradable unit had a total number of possible points. To compute the points earned for the unit: POINTS = SCORE/10 * TOTAL_POSSIBLE.
