

ITER3 Instructions

This iteration will follow the same basic procedures as the previous iterations. Specifically, your team will need to propose tasks for ITER3 (12 hours of work per team member), and I must approve your tasks.

Deliverable: ITER3 tasks (12 hours worth per team member)

Due: Before 5pm on Wednesday after ITER3 planning day

Each team member must save his/her list of tasks in the **ProjectPlan/ITER3.txt** file in your team's project space. In each task, make it clear which UC(s) the task contributes to.

Also, as usual, you must complete and tag your ITER3 work before ITER4 Planning Day.

Deliverable: All completed ITER3 work

Due: Before ITER4 planning day

For your team to submit their ITER3 work, one team member must tag the **trunk** as **ITER3**.

Don't forget that the course places a strong emphasis on working functionality, so you should prioritize your work accordingly.

Although there are no special objectives for this iteration, your team must ensure that prior special objectives are completed and budget your tasks accordingly.
