

Homework 2: Codecademy Ruby Course

The goal of this homework is to ensure that you have a modicum of proficiency programming in Ruby. To accomplish this goal, you must complete Codecademy's online course on Ruby:

<http://www.codecademy.com/tracks/ruby>

At the time of writing, Codecademy estimates the course to take 9 hours to complete.

After you've completed the course, you must do the following, so I can confirm your work:

1. Make your Codecademy profile public (under "Account settings", make it so "Everyone" can view your profile). The instructor will need to be able to view your profile to confirm that you completed the course.
2. Upload a text file that contains the URL of your Codecademy profile page (see the "View my profile" link) to the appropriate eCourseware dropbox before the posted deadline. The instructor will use this link to get to your profile page.

Note that your profile page must list "Ruby" under your "Completed Skills". If your page does not list this, then you have not fully completed the course.
