

Milestone 2 Checklist

- Demo video
- Who-did-what document for the demo video
- Version of your code from the demo video tagged in GitHub
- Up-to-date versions of your user stories, design artifacts, and planning artifacts
- Individual assignments and outcomes
- Instructions to the instructors, submitted to eCourseware dropbox
- Teammate evaluations

Milestone 2 Instructions

1. Demo Video, Project Artifacts, and Live Demo (Public)

Similar to Milestone 1, there are three main deliverables for Milestone 2: a demo video, a collection of project artifacts, and a live demo session—this time in public.

You should refer to the Milestone 1 Instructions document for the detailed instructions regarding what each of these deliverables should include and the criteria by which they will be graded. In particular, see these parts of the document:

- **Demo Video and Who-Did-What Document:** Same instructions as last time (still must be 8–10 minutes in length).
- **Project Artifacts:** Same instructions as last time, except that now the Git tag must be "milestone2".
- **Demo Session:** Same instructions as last time, except that now the session will be held in public, and the demo length must be 9–12 minutes.

2. Individual Assignments

Full task planning and outcome reporting must be part of each iteration and milestone. See the *Individual Assignment Specification* document for detailed instructions.

3. Instructions to the Instructors

Since the way to access the various milestone artifacts may vary from team to team, each team must submit a document containing instructions to the instructors regarding how to access each artifact. This document must be submitted to an eCourseware dropbox by the milestone deadline.

4. Teammate Evaluations

At the end of each iteration, each team member must provide an evaluation of each other team member. Instructions and forms for performing these teammate evaluations will be communicated by email near the end of the iteration.
